

INSTALLATION NOTICE for Replacement Evaporator Fan Motors Spade Terminals

⚠ NOTICE

The CMP evaporator fan motor is designed to fit several model refrigerators. If the connectors to the motor have the same spade connectors as the replacement motor, no adaptations need to be performed. If the existing motor is hard wired, instead of replacing the complete wire harness, use the included spade connectors.

Disconnect power before servicing.
Failure to do so can result in death or
electrical shock.

Instructions

1. Cut the wire as close to the motor as possible.
2. Strip the wire back ¼" and crimp the included spade terminals to each wire.
3. There are three connectors to the motor.
 - a. The smaller spade terminal is for the ground connector. This is usually a green wire.
 - b. The two larger terminals supply power to the motor. These are usually white and black or red wires. Attach in the same order as removed.
